

Product designer and design engineer with 10+ years building data-heavy tools for expert users — turning dense technical requirements into coherent, self-service experiences across B2B platforms, developer tooling, and operational workflows.

SKILLS

UI/UX Design
Data Visualization
Design Systems
Information Architecture
Information Design
Front-End Dev.
User Research

SOFTWARE

Design

Figma
Adobe CC

Front-End

React.js
TypeScript
ShadCn
TailwindCSS
Three.js

Data Visualization

D3.js
Tableau
PowerBI

Mapping

Mapbox.js
Leaflet.js

Back-End

Python
Node

WORK EXPERIENCE

Data Visualization Analyst (Product Lead) | **UNDP**, New York (Remote) Nov '21–Present

Leading a cross-functional team of designers, analysts, and developers to design and build UNDP's (United Nations Development Programme) data ecosystem — spanning data applications, analytics products, and storytelling experiences.

- Leading end-to-end product development of UNDP's flagship data platform — **Data Futures Exchange** (data.undp.org) — spanning user research, product strategy, UX design, and implementation, reaching **1M+ page visits** and **225K+ unique users**.
- Designed and developed **UNDP Visualization Library** (dataviz.design.undp.org) — a React-based **data visualization framework** used across 50+ UNDP data projects.
- Architected and led the **UNDP Design System for React** (react.design.undp.org) — a **component library and design system** enabling consistent UI delivery across UNDP's digital products.
- Driving team delivery workflows and acting as the **primary technical and product liaison** for UNDP stakeholders — translating strategic priorities into actionable briefs.
- Provided **design consultation** for **UNDP Chat** — UNDP's generative AI platform.

Sr. UI/UX Designer | **ICEYE**, Helsinki (FI)

Oct '23–Jun '26

Sole designer on a cross-functional team building mission-critical **satellite capacity booking and tracking tools**.

- Led end-to-end design of the **ICEYE Tactical Access Portal** — from discovery and user research through to shipped product — **with 5+ enterprise customers** migrating from legacy tasking workflows within 6 months of launch.
- Researched and designed **geospatial** ordering and tracking workflows for Earth observation data through iterative research and interviews with users — enabling **urgent imagery requests without specialist expertise**.
- Built and maintained a scalable **design system** that improved cross-product consistency and reduced design-to-development handoff time.

Sr. UX Designer | **Aiven**, Helsinki (FI)

Aug '21–Oct '23

Designed **B2B developer experience (DX) tooling** for a cloud **data infrastructure SaaS platform** — owning product areas end-to-end from discovery through delivery.

- Owned end-to-end UX for **Aiven for ClickHouse** — from **user research** with data engineers to **designing workflows** for deployment, query testing, and access management in a unified self-service flow.
- Designed **Aiven for Apache Flink** — creating onboarding and workflow patterns that made a **deeply technical product approachable** without oversimplifying it.
- Owned UX for **Aiven Klaw** — a **self-service Kafka topic management tool** — surfacing complex governance logic in a clear, usable interface.
- Conducted user research with developers and data engineers, translating findings into **personas, journey maps, and interaction patterns**.

LANGUAGE SKILLS

English

Hindi

Swedish (B1/B2)

Sr. Designer (promoted from Designer) | **Futurice**, Helsinki (FI)

Aug '16–Aug '21

Design lead across a portfolio of complex B2B client products — scoping, discovering, and delivering tools for expert operators in high-stakes environments.

OnWatch Scout | MacGregor Oy

- Sole designer on a **predictive maintenance platform** for offshore vessel equipment — conducting **user interviews with crews** to design visual interfaces and equipment illustrations for diagnosing component conditions and predicting failures.

VR Ohjus | VR Group

- Designed **real-time train data visualizations** for Helsinki's rail network — iterating with dispatchers to create live tube maps communicating positional and delay data simultaneously, **reducing cognitive load under time pressure**.

Oma Fingrid | Fingrid Oy

- Led design of **data-driven electricity grid monitoring platform** — working across user roles from grid operators to financial analysts to **surface the right granularity** of live usage, generation, and consumption data through interactive maps and graphs.

Fortum Apollo | Fortum Oy

- Designed a **hydropower forecasting tool** for pricing and planning decisions — co-developing a **visual templating system** through close collaboration with analysts, enabling them to customize graph and report layouts without design involvement.

ACADEMICS

Aalto University School of Arts, Design, and Architecture

Aug '14–Nov '18

M.A. | Visual Communication Design (Focus on Information Design)

Indian Institute of Technology Bombay (IITB)

Aug '07–Jul '12

B. Tech + M. Tech. (Dual degree) | Electrical Engineering (Specialization in Communication and Signal Processing)

PROJECTS

VR-Viz (vr-viz.mustafasaifee.dev) — Aalto University (Master's Thesis Project)

An open-source library, and visualization system for creating data visualization and maps in 3D and virtual reality on web

- Featured in O'Reilly's book: **Creating Augmented and Virtual Realities**.
- Shortlisted for the **Information is Beautiful award 2019**.

Women's Representation in Judiciary (womeninjudiciary.undp.org) — UNDP

Role: Data visualization, front-end development

SDG Push Diagnostics (sdgdiagnostics.data.undp.org) — UNDP

Role: Data visualization, front-end development, data analysis

Gendered Toponyms (gendered-toponyms.mustafasaifee.dev) — Personal project

Role: Data visualization, front-end development, data analysis
