Product Designer with 10+ years of experience designing complex, data-heavy tools for expert users, including B2B platforms, developer tooling, and operational workflows. I specialize in turning dense technical requirements into coherent, self-service experiences that reduce cognitive load and drive productivity. I work end-to-end: from stakeholder workshops and user research through to interaction design, design systems, and front-end implementation.

Experience

Sr. UI/UX Designer | **ICEYE**, Helsinki (FI)

Oct '23–Present

Sole designer on a cross-functional team building mission-critical satellite capacity booking and tracking tools used by defense and intelligence operators globally.

- Led end-to-end design of the **ICEYE Tactical Access Portal** — from discovery and user research through to shipped product that enables operators to book, track, and manage time-sensitive satellite imagery requests through a single workflow.
- Designed **geospatial** ordering experiences for Earth observation data, balancing the needs of technical and non-technical users across customer-facing and internal platforms.
- Designed guided workflows for requesting and tracking satellite imagery, enabling operators to complete tasks without specialist training.
- Built and maintain a scalable **design system** that improved cross-product consistency and significantly reduced design-to-development handoff time.
- Collaborated closely with PMs, engineers, and domain experts to ensure operational tool designs reflected real field constraints, not just assumed workflows.

Data Visualization Analyst | **UNDP**, New York (Contract, Remote)

Nov '21–Present

Lead a small team of analysts, designers, and developers to own and evolve UNDP's data platform and data infrastructure.

- Own end-to-end product development of **Data Future's Exchange** (data.undp.org) — **UNDP's flagship open data platform** — from information architecture and UX through to front-end implementation.
- Designed and developed **UNDP Visualization Library** (dataviz.design.undp.org) — a reusable component system for interactive charts, maps, and dashboards now used across 50+ UNDP data projects worldwide.
- Architected and led the **UNDP Design System for React** (react.design.undp.org) — a scalable, accessible component library enabling consistent UI delivery across UNDP's digital products.
- Manage the team workflow, review design and code output, and act as the main point of contact with UNDP stakeholders — translating development priorities into actionable briefs for the team.
- Provided UX consultation and design feedback for **UNDP Chat** (chat.data.undp.org) — **UNDP's generative AI platform**.

Sr. UX Designer | **Aiven**, Helsinki (FI)

Aug '21–Oct '23

Designed B2B partner and developer tooling for a cloud data infrastructure SaaS platform — owning product areas end-to-end, from discovery through to shipped interfaces.

- Conducted user research with developers and data engineers, translating findings into personas, journey maps, and interaction patterns.
- Owned the end-to-end experience for **ClickHouse on Aiven**, designing workflows for provisioning, database table creation, query testing, and access management within a unified self-service experience.
- Designed **Apache Flink for Aiven**, a fully managed data streaming service, navigating the challenge of making a deeply technical product approachable without oversimplifying it. Designed onboarding and workflow patterns that helped users configure streaming pipelines without requiring deep knowledge of underlying Flink infrastructure.
- Owned UX for **Aiven Klaw**, a self-service Kafka topic management tool, from concept through delivery, working closely with backend engineers to surface complex governance logic in a clear, usable interface.

Swedish (intermediate)

Sr. Designer/Designer | **Futurice**, Helsinki (FI)

Aug '16–Aug '21

Design lead across a portfolio of complex B2B client products — working directly with business stakeholders to scope, discover, and deliver tools used by expert operators in high-stakes environments.

OnWatch Scout | MacGregor Oy

- Sole designer on a predictive maintenance platform for offshore vessel equipment, used by crews managing multi-million euro machinery at sea. Designed visual interfaces with equipment illustrations to analyze component conditions and predict maintenance needs.

VR Ohjus | VR Group

- Designed real-time train data visualizations for Helsinki's rail network, supporting dispatchers in making location-based and scheduling decisions under time pressure. Created innovative live tube maps that communicated both positional and delay data simultaneously — reducing the cognitive load of switching between systems.

Oma Fingrid | Fingrid Oy

- Led the design of a data-driven platform giving electricity companies live visibility into grid usage, generation, and consumption across Finland. Designed interactive maps and financial data graphs that surfaced the right granularity of information for different user roles — from grid operators to financial analysts.

Fortum Apollo | Fortum

- Shaped the design of mid-term hydropower forecasting tool used for pricing and planning decisions, where data accuracy and legibility directly influenced financial outcomes. Co-developed a visual templating language enabling analysts to customize their own graph and report layouts — reducing dependency on design for routine reporting needs.

Academics

Aalto University School of Arts, Design, and Architecture, Finland

Aug '14–Nov '18

M.A. | Visual Communication Design (Focus on Information Design)

Indian Institute of Technology Bombay (IITB), India

Aug '07–Jul '12

B. Tech + M. Tech. (Dual degree) | Electrical Engineering (Specialization in Communication and Signal Processing)

Academic Projects

VR-Viz (*vr-viz.mustafasaifee.dev*) | Master's Thesis Project

Developed VR-Viz, an open-source JavaScript library, and visualization system for creating data visualization and maps in 3D and virtual reality on web

- Featured in O'Reilly's book: **Creating Augmented and Virtual Realities**.
- Shortlisted for the **Information is Beautiful** award 2019.
